Table of Contents

with Summary of Topics

Introduction	1
Descriptive versus inferential statistics	1
Statistic versus parameter	2
Levels of measurement	2
Continuous versus discrete variables	4
Measures of central tendency (mode, median, mean, weighted mean, geometric mean, and the harmonic mean)	4
Measures of variability (range; quantiles, percentiles, deciles, and quartiles; variance and standard deviation; the coefficient of variation)	10
Measures of skewness and kurtosis	16
Visual methods for displaying data (tables and graphs, exploratory data analysis (stem-and-leaf displays and boxplots))	29
The normal distribution	45
Hypothesis testing	56
A history and critique of the classical hypothesis testing model	68
Estimation in inferential statistics	74
Relevant concepts, issues, and terminology in conducting research (the case study method; the experimental method; the correlational method)	75
Experimental design (pre-experimental designs; quasi-experimental designs true experimental designs; single-subject designs)	82
Sampling methodologies	98
Basic principles of probability	100
Parametric versus nonparametric inferential statistical tests	108
Univariate versus bivariate versus multivariate statistical procedures	109
Selection of the appropriate statistical procedure	110

Outline of Inferential Statistical Tests and Measures of Correlation/Association	125
---	------------

Guidelines and Decision Tables for Selecting the Appropriate Statistical Procedure	133
---	------------

Inferential Statistical Tests Employed with a Single Sample	141
--	------------

Test 1: The Single-Sample z Test	143
I. Hypothesis Evaluated with Test and Relevant Background Information	143
II. Example	143
III. Null versus Alternative Hypotheses	143
IV. Test Computations	144
V. Interpretation of the Test Results	145
VI. Additional Analytical Procedures for the Single-Sample z Test and/or Related Tests	146

VII. Additional Discussion of the Single-Sample z Test	146
1. The interpretation of a negative z value	146
2. The standard error of the population mean and graphical representation of the results of the single-sample z test	147
3. Additional examples illustrating the interpretation of a computed z value	152
4. The z test for a population proportion	152
VIII. Additional Examples Illustrating the Use of the Single-Sample z Test	153
Test 2: The Single-Sample t Test	157
I. Hypothesis Evaluated with Test and Relevant Background Information	157
II. Example	158
III. Null versus Alternative Hypotheses	158
IV. Test Computations	158
V. Interpretation of the Test Results	160
VI. Additional Analytical Procedures for the Single-Sample t Test and/or Related Tests	162
1. Determination of the power of the single-sample t test and the single-sample z test, and the application of Test 2a: Cohen's d index	162
2. Computation of a confidence interval for the mean of the population represented by a sample	173
VII. Additional Discussion of the Single-Sample t Test	183
1. Degrees of freedom	183
VIII. Additional Examples Illustrating the Use of the Single-Sample t Test	184
Test 3: The Single-Sample Chi-Square Test for a Population Variance	191
I. Hypothesis Evaluated with Test and Relevant Background Information	191
II. Example	192
III. Null versus Alternative Hypotheses	192
IV. Test Computations	193
V. Interpretation of the Test Results	194
VI. Additional Analytical Procedures for the Single-Sample Chi-Square Test for a Population Variance and/or Related Tests	196
1. Large sample normal approximation of the chi-square distribution	196
2. Computation of a confidence interval for the variance of a population represented by a sample	197
3. Sources for computing the power of the single-sample chi-square test for a population variance	200
VII. Additional Discussion of the Single-Sample Chi-Square Test for a Population Variance	200
VIII. Additional Examples Illustrating the Use of the Single-Sample Chi-Square Test for a Population Variance	200
Test 4: The Single-Sample Test for Evaluating Population Skewness	205
I. Hypothesis Evaluated with Test and Relevant Background Information	205
II. Example	206
III. Null versus Alternative Hypotheses	206
IV. Test Computations	207
V. Interpretation of the Test Results	209

VI. Additional Analytical Procedures for the Single-Sample Test for Evaluating Population Skewness and/or Related Tests	210
VII. Additional Discussion of the Single-Sample Test for Evaluating Population Skewness	210
1. Exact tables for the single-sample test for evaluating population skewness	210
2. Note on a nonparametric test for evaluating skewness	210
VIII. Additional Examples Illustrating the Use of the Single-Sample Test for Evaluating Population Skewness	211
Test 5: The Single-Sample Test for Evaluating Population Kurtosis	213
I. Hypothesis Evaluated with Test and Relevant Background Information	213
II. Example	214
III. Null versus Alternative Hypotheses	214
IV. Test Computations	215
V. Interpretation of the Test Results	217
VI. Additional Analytical Procedures for the Single-Sample Test for Evaluating Population Kurtosis and/or Related Tests	218
1. Test 5a: The D'Agostino–Pearson test of normality	218
2. Test 5b: The Jarque–Bera test of normality	219
VII. Additional Discussion of the Single-Sample Test for Evaluating Population Kurtosis	220
1. Exact tables for the single-sample test for evaluating population kurtosis	220
2. Additional comments on tests of normality	220
VIII. Additional Examples Illustrating the Use of the Single-Sample Test for Evaluating Population Kurtosis	221
Test 6: The Wilcoxon Signed-Ranks Test	225
I. Hypothesis Evaluated with Test and Relevant Background Information	225
II. Example	225
III. Null versus Alternative Hypotheses	226
IV. Test Computations	226
V. Interpretation of the Test Results	228
VI. Additional Analytical Procedures for the Wilcoxon Signed-Ranks Test and/or Related Tests	230
1. The normal approximation of the Wilcoxon T statistic for large sample sizes	230
2. The correction for continuity for the normal approximation of the Wilcoxon signed-ranks test	232
3. Tie correction for the normal approximation of the Wilcoxon test statistic	233
4. Computation of a confidence interval for a population median	234
VII. Additional Discussion of the Wilcoxon Signed-Ranks Test	235
1. Power-efficiency of the Wilcoxon signed-ranks test and the concept of asymptotic relative efficiency	235
2. Note on symmetric population concerning hypotheses regarding median and mean	236
VIII. Additional Examples Illustrating the Use of the Wilcoxon Signed-Ranks Test	237

Test 7: The Kolmogorov–Smirnov Goodness-of-Fit Test for a Single Sample	241
I. Hypothesis Evaluated with Test and Relevant Background Information	241
II. Example	242
III. Null versus Alternative Hypotheses	243
IV. Test Computations	244
V. Interpretation of the Test Results	248
VI. Additional Analytical Procedures for the Kolmogorov–Smirnov Goodness-of-Fit Test for a Single Sample and/or Related Tests	249
1. Computing a confidence interval for the Kolmogorov–Smirnov goodness-of-fit test for a single sample	249
2. The power of the Kolmogorov–Smirnov goodness-of-fit test for a single sample	250
3. Test 7a: The Lilliefors test for normality	250
VII. Additional Discussion of the Kolmogorov–Smirnov Goodness-of-Fit Test for a Single Sample	252
1. Effect of sample size on the result of a goodness-of-fit test	252
2. The Kolmogorov–Smirnov goodness-of-fit test for a single sample versus the chi-square goodness-of-fit test and alternative goodness-of-fit tests	253
VIII. Additional Examples Illustrating the Use of the Kolmogorov–Smirnov Goodness-of-Fit Test for a Single Sample	253
Test 8: The Chi-Square Goodness-of-Fit Test	257
I. Hypothesis Evaluated with Test and Relevant Background Information	257
II. Examples	258
III. Null versus Alternative Hypotheses	258
IV. Test Computations	259
V. Interpretation of the Test Results	261
VI. Additional Analytical Procedures for the Chi-Square Goodness-of-Fit Test and/or Related Tests	261
1. Comparisons involving individual cells when $k > 2$	261
2. The analysis of standardized residuals	264
3. The correction for continuity for the chi-square goodness-of-fit test	265
4. Computation of a confidence interval for the chi-square goodness-of-fit test/confidence interval for a population proportion	266
5. Brief discussion of the z test for a population proportion (Test 9a) and the single-sample test for the median (Test 9b)	269
6. Application of the chi-square goodness-of-fit test for assessing goodness-of-fit for a theoretical population distribution	269
7. Sources for computing of the power of the chi-square goodness-of-fit test	273
8. Heterogeneity chi-square analysis	273
VII. Additional Discussion of the Chi-Square Goodness-of-Fit Test	277
1. Directionality of the chi-square goodness-of-fit test	277
2. Additional goodness-of-fit tests	279
VIII. Additional Examples Illustrating the Use of the Chi-Square Goodness-of-Fit Test	280

Test 9: The Binomial Sign Test for a Single Sample	289
I. Hypothesis Evaluated with Test and Relevant Background Information	289
II. Examples	290
III. Null versus Alternative Hypotheses	290
IV. Test Computations	291
V. Interpretation of the Test Results	293
VI. Additional Analytical Procedures for the Binomial Sign Test for a Single Sample and/or Related Tests	294
1. Test 9a: The z test for a population proportion (with discussion of correction for continuity; computation of a confidence interval; procedure for computing sample size for test of specified power; additional comments on computation of the power of the binomial sign test for a single sample)	294
2. Extension of the z test for a population proportion to evaluate the performance of m subjects on n trials on a binomially distributed variable	303
3. Test 9b: The single-sample test for the median	305
VII. Additional Discussion of the Binomial Sign Test for a Single Sample	308
1. Evaluating goodness-of-fit for a binomial distribution	308
VIII. Additional Example Illustrating the Use of the Binomial Sign Test for a Single Sample	310
IX. Addendum	311
1. Discussion of additional discrete probability distributions and the exponential distribution	311
The multinomial distribution	311
The negative binomial distribution	313
The hypergeometric distribution	316
The Poisson distribution	319
Computation of a confidence interval for a Poisson parameter	322
Test 9c: Test for evaluating two Poisson counts	323
Evaluating goodness-of-fit for a Poisson distribution	324
The exponential distribution	326
The matching distribution	330
2. Conditional probability, Bayes' theorem, Bayesian statistics and hypothesis testing	332
Conditional probability	332
Bayes' theorem	333
Bayesian hypothesis testing	349
Bayesian analysis of a continuous variable	374
Test 10: The Single-Sample Runs Test (and Other Tests of Randomness)	389
I. Hypothesis Evaluated with Test and Relevant Background Information	389
II. Example	390
III. Null versus Alternative Hypotheses	391
IV. Test Computations	391
V. Interpretation of the Test Results	391
VI. Additional Analytical Procedures for the Single-Sample Runs Test and/or Related Tests	392
1. The normal approximation of the single-sample runs test for large sample sizes	392
2. The correction for continuity for the normal approximation of the	

single-sample runs test	393
3. Extension of the runs test to data with more than two categories	394
4. Test 10a: The runs test for serial randomness	395
VII. Additional Discussion of the Single-Sample Runs Test	398
1. Additional discussion of the concept of randomness	398
VII. Additional Examples Illustrating the Use of the Single-Sample Runs Test	399
IX. Addendum	402
1. The generation of pseudorandom numbers (The midsquare method; the midproduct method; the linear congruential method)	402
2. Alternative tests of randomness	
Test 10b: The frequency test	407
Test 10c: The gap test	409
Test 10d: The poker test	413
Test 10e: The maximum test	413
Test 10f: The coupon collector's test	414
Test 10g: The mean square successive difference test (for serial randomness	417
Additional tests of randomness (Autocorrelation; The serial test; The d^2 square test of random numbers; Tests of trend analysis/time series analysis)	419

Inferential Statistical Tests Employed with Two Independent Samples (and Related Measures of Association/Correlation) 425

Test 11: The t Test for Two Independent Samples	427
I. Hypothesis Evaluated with Test and Relevant Background Information	427
II. Example	427
III. Null versus Alternative Hypotheses	428
IV. Test Computations	428
V. Interpretation of the Test Results	431
VI. Additional Analytical Procedures for the t Test for Two Independent Samples and/or Related Tests	432
1. The equation for the t test for two independent samples when a value for a difference other than zero is stated in the null hypothesis	432
2. Test 11a: Hartley's F_{\max} test for homogeneity of variance/ F test for two population variances: Evaluation of the homogeneity of variance assumption of the t test for two independent samples	434
3. Computation of the power of the t test for two independent samples and the application of Test 11b: Cohen's d index	439
4. Measures of magnitude of treatment effect for the t test for two independent samples: Omega squared (Test 11c) and Eta squared (Test 11d)	446
5. Computation of a confidence interval for the t test for two independent samples	448
6. Test 11e: The z test for two independent samples	450
VII. Additional Discussion of the t Test for Two Independent Samples	452
1. Unequal sample sizes	452
2. Robustness of the t test for two independent samples	453

3. Outliers (Box-and-whisker plot criteria; Standard deviation score criteria; Test 11f: Median absolute deviation test for identifying outliers and Test 11g: Extreme Studentized deviate test for identifying outliers ; trimming data; Winsorization) and data transformation	454
4. Missing data	468
5. Clinical trials	471
6. Tests of equivalence (Test 11h: The Westlake-Schuirman test of equivalence of two independent treatments (and procedure for computing sample size in reference to the power of the test) and Test 11i: Tryon's test of equivalence of two independent treatments)	474
7. Hotelling's T^2	498
VIII. Additional Examples Illustrating the Use of the t Test for Two Independent Samples	499
Test 12: The Mann-Whitney U Test	513
I. Hypothesis Evaluated with Test and Relevant Background Information	513
II. Example	514
III. Null versus Alternative Hypotheses	514
IV. Test Computations	515
V. Interpretation of the Test Results	518
VI. Additional Analytical Procedures for the Mann-Whitney U Test and/or Related Tests	518
1. The normal approximation of the Mann-Whitney U statistic for large sample sizes	518
2. The correction for continuity for the normal approximation of the Mann-Whitney U test	520
3. Tie correction for the normal approximation of the Mann-Whitney U statistic	521
4. Computation of a confidence interval for a difference between the medians of two independent populations	521
VII. Additional Discussion of the Mann-Whitney U Test	524
1. Power-efficiency of the Mann-Whitney U test	524
2. Equivalency of the normal approximation of the Mann-Whitney U test and the t test for two independent samples with rank-orders	524
3. Alternative nonparametric rank-order procedures for evaluating a design involving two independent samples	524
VIII. Additional Examples Illustrating the Use of the Mann-Whitney U Test	525
IX. Addendum	526
1. Computer-intensive tests (Randomization and permutation tests: Test 12a: The randomization test for two independent samples ; Test 12b: The bootstrap ; Test 12c: The jackknife ; Final comments on computer-intensive procedures)	526
2. Survival analysis (Test 12d: Kaplan-Meier estimate)	540
3. Procedures for evaluating censored data in a design involving two independent samples (Permutation test based on the median for censored data , Gehan's test for censored data (Test 12e) , and the log-rank test (Test 12f))	550

Test 13: The Kolmogorov–Smirnov Test for Two Independent Samples	577
I. Hypothesis Evaluated with Test and Relevant Background Information	577
II. Example	578
III. Null versus Alternative Hypotheses	578
IV. Test Computations	580
V. Interpretation of the Test Results	582
VI. Additional Analytical Procedures for the Kolmogorov–Smirnov test for two independent samples and/or Related Tests	583
1. Graphical method for computing the Kolmogorov–Smirnov test statistic	583
2. Computing sample confidence intervals for the Kolmogorov–Smirnov test for two independent samples	584
3. Large sample chi-square approximation for a one-tailed analysis of the Kolmogorov–Smirnov test for two independent samples	584
VII. Additional Discussion of the Kolmogorov–Smirnov Test for Two Independent Samples	585
1. Additional comments on the Kolmogorov–Smirnov test for two independent samples	585
VIII. Additional Examples Illustrating the Use of the Kolmogorov–Smirnov Test for Two Independent Samples	585
Test 14: The Siegel–Tukey Test for Equal Variability	589
I. Hypothesis Evaluated with Test and Relevant Background Information	589
II. Example	590
III. Null versus Alternative Hypotheses	590
IV. Test Computations	591
V. Interpretation of the Test Results	594
VI. Additional Analytical Procedures for the Siegel–Tukey Test for Equal Variability and/or Related Tests	594
1. The normal approximation of the Siegel–Tukey test statistic for large sample sizes	594
2. The correction for continuity for the normal approximation of the Siegel–Tukey test for equal variability	595
3. Tie correction for the normal approximation of the Siegel–Tukey test statistic	596
4. Adjustment of scores for the Siegel–Tukey test for equal variability when $\theta_1 \neq \theta_2$	596
VII. Additional Discussion of the Siegel–Tukey Test for Equal Variability	598
1. Analysis of the homogeneity of variance hypothesis for the same set of data with both a parametric and nonparametric test, and the power-efficiency of the Siegel–Tukey Test for Equal Variability	598
2. Alternative nonparametric tests of dispersion	599
VIII. Additional Examples Illustrating the Use of the Siegel–Tukey Test for Equal Variability	600
Test 15: The Moses Test for Equal Variability	605
I. Hypothesis Evaluated with Test and Relevant Background Information	605
II. Example	606

III. Null versus Alternative Hypotheses	606
IV. Test Computations	608
V. Interpretation of the Test Results	610
VI. Additional Analytical Procedures for the Moses Test for Equal Variability and/or Related Tests	611
1. The normal approximation of the Moses test statistic for large sample sizes	611
VII. Additional Discussion of the Moses Test for Equal Variability	612
1. Power-efficiency of the Moses Test for equal variability	612
2. Issue of repetitive resampling	613
3. Alternative nonparametric tests of dispersion	613
VIII. Additional Examples Illustrating the Use of the Moses Test for Equal Variability	613
Test 16: The Chi-Square Test for $r \times c$ Tables (Test 16a: The Chi-Square Test for Homogeneity; Test 16b: The Chi-Square Test of Indepen- dence (employed with a single sample))	619
I. Hypothesis Evaluated with Test and Relevant Background Information	619
II. Examples	621
III. Null versus Alternative Hypotheses	622
IV. Test Computations	625
V. Interpretation of the Test Results	626
VI. Additional Analytical Procedures for the Chi-Square Test for $r \times c$ Tables and/or Related Tests	628
1. Yates' correction for continuity	628
2. Quick computational equation for a 2×2 table	629
3. Evaluation of a directional alternative hypothesis in the case of a $2 \times$ 2 contingency table	630
4. Test 16c: The Fisher exact test	631
5. Test 16d: The z test for two independent proportions (and computation of sample size in reference to power)	637
6. Computation of a confidence interval for a difference between two proportions	643
7. Test 16e: The median test for independent samples	645
8. Extension of the chi-square test for $r \times c$ tables to contingency tables involving more than two rows and/or columns, and associated comparison procedures	647
9. The analysis of standardized residuals	653
10. Sources for computing the power of the chi-square test for $r \times c$ tables	655
11. Measures of association for $r \times c$ contingency tables	655
Test 16f: The contingency coefficient	657
Test 16g: The phi coefficient	659
Test 16h: Cramér's phi coefficient	660
Test 16i: Yule's Q	661
Test 16j: The odds ratio (and the concept of relative risk) (and Test 16j-a: Test of significance for an odds ratio and computation of a confidence interval for an odds ratio)	662
Test 16k: Cohen's kappa (and computation of a confidence interval for kappa, Test 16k-a: Test of significance for	

	Cohen's kappa, and Test 16k-b: Test of significance for two independent values of Cohen's kappa)	669
12.	Combining the results of multiple 2×2 contingency tables:	673
	Heterogeneity chi-square analysis for a 2×2 contingency table	673
	Test 16l: The Mantel-Haenszel analysis (Test 16l-a: Test of homogeneity of odds ratios for Mantel-Haenszel analysis, Test 16l-b: Summary odds ratio for Mantel-Haenszel analysis, and Test 16l-c: Mantel-Haenszel test of association)	676
VII.	Additional Discussion of the Chi-Square Test for $r \times c$ Tables	688
	1. Equivalency of the chi-square test for $r \times c$ tables when $c = 2$ with the t test for two independent samples (when $r = 2$) and the single-factor between-subjects analysis of variance (when $r \geq 2$)	688
	2. Test of equivalence for two independent proportions: Test 16m: The Westlake-Schuurmann test of equivalence of two independent proportions (and procedure for computing sample size in reference to the power of the test)	688
	3. Test 16n: The log-likelihood ratio	698
	4. Simpson's Paradox	700
	5. Analysis of multidimensional contingency tables through use of a chi-square analysis	702
	6. Test 16o: Analysis of multidimensional contingency tables with log-linear analysis	713
VIII.	Additional Examples Illustrating the Use of the Chi-Square Test for $r \times c$ Tables	727

Inferential Statistical Tests Employed with Two Dependent Samples (and Related Measures of Association/Correlation) 741

Test 17: The <i>t</i> Test for Two Dependent Samples	743
I. Hypothesis Evaluated with Test and Relevant Background Information	743
II. Example	744
III. Null versus Alternative Hypotheses	744
IV. Test Computations	745
V. Interpretation of the Test Results	747
VI. Additional Analytical Procedures for the <i>t</i> Test for Two Dependent Samples and/or Related Tests	748
1. Alternative equation for the <i>t</i> test for two dependent samples	748
2. The equation for the <i>t</i> test for two dependent samples when a value for a difference other than zero is stated in the null hypothesis	752
3. Test 17a: The <i>t</i> test for homogeneity of variance for two dependent samples: Evaluation of the homogeneity of variance assumption of the <i>t</i> test for two dependent samples	752
4. Computation of the power of the <i>t</i> test for two dependent samples and the application of Test 17b: Cohen's <i>d</i> index	755
5. Measure of magnitude of treatment effect for the <i>t</i> test for two dependent samples: Omega squared (Test 17c)	761

6. Computation of a confidence interval for the <i>t</i> test for two dependent samples	763
7. Test 17d: Sandler's <i>A</i> test	764
8. Test 17e: The <i>z</i> test for two dependent samples	765
VII. Additional Discussion of the <i>t</i> Test for Two Dependent Samples	768
1. The use of matched subjects in a dependent samples design	768
2. Relative power of the <i>t</i> test for two dependent samples and the <i>t</i> test for two independent samples	771
3. Counterbalancing and order effects	772
4. Analysis of a one-group pretest-posttest design with the <i>t</i> test for two dependent samples	774
5. Tests of equivalence: Test 17f: The Westlake-Schuirman test of equivalence of two dependent treatments (and procedure for computing sample size in reference to the power of the test) and Test 17g: Tryon's test of equivalence of two dependent treatments	776
VIII. Additional Example Illustrating the Use of the <i>t</i> Test for Two Dependent Samples	785
Test 18: The Wilcoxon Matched-Pairs Signed-Ranks Test	791
I. Hypothesis Evaluated with Test and Relevant Background Information	791
II. Example	792
III. Null versus Alternative Hypotheses	792
IV. Test Computations	793
V. Interpretation of the Test Results	794
VI. Additional Analytical Procedures for the Wilcoxon Matched-Pairs Signed-Ranks Test and/or Related Tests	796
1. The normal approximation of the Wilcoxon <i>T</i> statistic for large sample sizes	796
2. The correction for continuity for the normal approximation of the Wilcoxon matched-pairs signed-ranks test	797
3. Tie correction for the normal approximation of the Wilcoxon test statistic	798
4. Computation of a confidence interval for a median difference between two dependent populations	799
VII. Additional Discussion of the Wilcoxon Matched-Pairs Signed-Ranks Test	801
1. Power-efficiency of the Wilcoxon matched-pairs signed-ranks test	801
2. Probability of superiority as a measure of effect size	801
3. Alternative nonparametric procedures for evaluating a design involving two dependent samples	801
VIII. Additional Examples Illustrating the Use of the Wilcoxon Matched-Pairs Signed-Ranks Test	802
Test 19: The Binomial Sign Test for Two Dependent Samples	805
I. Hypothesis Evaluated with Test and Relevant Background Information	805
II. Example	806
III. Null versus Alternative Hypotheses	806
IV. Test Computations	807
V. Interpretation of the Test Results	809

VI. Additional Analytical Procedures for the Binomial Sign Test for Two Dependent Samples and/or Related Tests	810
1. The normal approximation of the binomial sign test for two dependent samples with and without a correction for continuity	810
2. Computation of a confidence interval for the binomial sign test for two dependent samples	813
3. Sources for computing the power of the binomial sign test for two dependent samples, and comments on asymptotic relative efficiency of the test	814
VII. Additional Discussion of the Binomial Sign Test for Two Dependent Samples	815
1. The problem of an excessive number of zero difference scores	815
2. Equivalency of the binomial sign test for two dependent samples and the Friedman two-way analysis variance by ranks when $k = 2$	815
VIII. Additional Examples Illustrating the Use of the Binomial Sign Test for Two Dependent Samples	815
Test 20: The McNemar Test	817
I. Hypothesis Evaluated with Test and Relevant Background Information	817
II. Examples	818
III. Null versus Alternative Hypotheses	820
IV. Test Computations	822
V. Interpretation of the Test Results	822
VI. Additional Analytical Procedures for the McNemar Test and/or Related Tests	823
1. Alternative equation for the McNemar test statistic based on the normal distribution	823
2. The correction for continuity for the McNemar test	824
3. Computation of the exact binomial probability for the McNemar test model with a small sample size	825
4. Computation of the power of the McNemar test	827
5. Computation of a confidence interval for the McNemar test	828
6. Computation of an odds ratio for the McNemar test	829
7. Additional analytical procedures for the McNemar test	830
8. Test 20a: The Gart test for order effects	830
VII. Additional Discussion of the McNemar Test	838
1. Alternative format for the McNemar test summary table and modified test equation	838
2. The effect of disregarding matching	839
3. Alternative nonparametric procedures for evaluating a design with two dependent samples involving categorical data	840
4. Test of equivalence for two independent proportions: Test 20b: The Westlake-Schuurmann test of equivalence of two dependent proportions	840
VIII. Additional Examples Illustrating the Use of the McNemar Test	850
IX. Addendum	852
Extension of the McNemar test model beyond 2×2 contingency tables	852
1. Test 20c: The Bowker test of internal symmetry	852
2. Test 20d: The Stuart-Maxwell test of marginal homogeneity	856

Inferential Statistical Tests Employed with Two or More Independent Samples (and Related Measures of Association/Correlation)	865
Test 21: The Single-Factor Between-Subjects Analysis of Variance	867
I. Hypothesis Evaluated with Test and Relevant Background Information	867
II. Example	868
III. Null versus Alternative Hypotheses	868
IV. Test Computations	869
V. Interpretation of the Test Results	873
VI. Additional Analytical Procedures for the Single-Factor Between-Subjects Analysis of Variance and/or Related Tests	874
1. Comparisons following computation of the omnibus F value for the single-factor between-subjects analysis of variance (Planned versus unplanned comparisons (including simple versus complex comparisons); Linear contrasts; Orthogonal comparisons; Test 21a: Multiple t tests/Fisher's LSD test; Test 21b: The Bonferroni-Dunn test; Test 21c: Tukey's HSD test; Test 21d: The Newman-Keuls test; Test 21e: The Scheffé test; Test 21f: The Dunnett test; Additional discussion of comparison procedures and final recommendations; The computation of a confidence interval for a comparison)	874
2. Comparing the means of three or more groups when $k \geq 4$	905
3. Evaluation of the homogeneity of variance assumption of the single-factor between-subjects analysis of variance (Test 11a: Hartley's F_{\max} test for homogeneity of variance, Test 21g: The Levene Test for homogeneity of variance, Test 21h: The Brown-Forsythe test for homogeneity of variance)	906
4. Computation of the power of the single-factor between-subjects analysis of variance	913
5. Measures of magnitude of treatment effect for the single-factor between-subjects analysis of variance: Omega squared (Test 21i), Eta squared (Test 21j), and Cohen's f index (Test 21k)	916
6. Computation of a confidence interval for the mean of a treatment population	920
7. Trend analysis	922
VII. Additional Discussion of the Single-Factor Between-Subjects Analysis of Variance	934
1. Theoretical rationale underlying the single-factor between-subjects analysis of variance	934
2. Definitional equations for the single-factor between-subjects analysis of variance	936
3. Equivalency of the single-factor between-subjects analysis of variance and the t test for two independent samples when $k = 2$	938
4. Robustness of the single-factor between-subjects analysis of variance	939
5. Equivalency of the single-factor between-subjects analysis of variance and the t test for two independent samples with the chi-square test for $r \times c$ tables when $c = 2$	939

6. The general linear model	943
7. Fixed-effects versus random-effects models for the single-factor between-subjects analysis of variance	944
8. Multivariate analysis of variance (MANOVA)	944
VIII. Additional Examples Illustrating the Use of the Single-Factor Between- Subjects Analysis of Variance	945
IX. Addendum	946
1. Test 21I: The Single-Factor Between-Subjects Analysis of Covariance	946
Test 22: The Kruskal–Wallis One-Way Analysis of Variance by Ranks	981
I. Hypothesis Evaluated with Test and Relevant Background Information	981
II. Example	982
III. Null versus Alternative Hypotheses	983
IV. Test Computations	983
V. Interpretation of the Test Results	985
VI. Additional Analytical Procedures for the Kruskal–Wallis One-Way Analysis of Variance by Ranks and/or Related Tests	985
1. Tie correction for the Kruskal–Wallis one-way analysis of variance by ranks	985
2. Pairwise comparisons following computation of the test statistic for the Kruskal–Wallis one-way analysis of variance by ranks	986
VII. Additional Discussion of the Kruskal–Wallis One-Way Analysis of Variance by Ranks	990
1. Exact tables of the Kruskal–Wallis distribution	990
2. Equivalency of the Kruskal–Wallis one-way analysis of variance by ranks and the Mann–Whitney U test when $k = 2$	990
3. Power-efficiency of the Kruskal–Wallis one-way analysis of variance by ranks	991
4. Alternative nonparametric rank-order procedures for evaluating a design involving k independent samples	991
VIII. Additional Examples Illustrating the Use of the Kruskal–Wallis One- Way Analysis of Variance by Ranks	992
IX. Addendum	993
1. Test 22a: The Jonckheere–Terpstra Test for Ordered Alternatives	993
Test 23: The Van der Waerden Normal-Scores Test for k Independent Samples	1007
I. Hypothesis Evaluated with Test and Relevant Background Information	1007
II. Example	1008
III. Null versus Alternative Hypotheses	1008
IV. Test Computations	1009
V. Interpretation of the Test Results	1011
VI. Additional Analytical Procedures for the van der Waerden Normal- Scores Test for k Independent Samples and/or Related Tests	1012
1. Pairwise comparisons following computation of the test statistic for the van der Waerden normal-scores test for k independent samples	1012
VII. Additional Discussion of the van der Waerden Normal-Scores Test for k Independent Samples	1015

1. Alternative normal-scores tests	1015
VIII. Additional Examples Illustrating the Use of the van der Waerden Normal-Scores Test for k Independent Samples	1015

Inferential Statistical Tests Employed with Two or More Dependent Samples (and Related Measures of Association/Correlation) 1021

Test 24: The Single-Factor Within-Subjects Analysis of Variance	1023
I. Hypothesis Evaluated with Test and Relevant Background Information	1023
II. Example	1025
III. Null versus Alternative Hypotheses	1025
IV. Test Computations	1025
V. Interpretation of the Test Results	1030
VI. Additional Analytical Procedures for the Single-Factor Within-Subjects Analysis of Variance and/or Related Tests	1031
1. Comparisons following computation of the omnibus F value for the single-factor within-subjects analysis of variance (Test 24a: Multiple t tests/Fisher's LSD test; Test 24b: The Bonferroni–Dunn test; Test 24c: Tukey's HSD test; Test 24d: The Newman–Keuls test; Test 24e: The Scheffé test; Test 24f: The Dunnett test; The compu- tation of a confidence interval for a comparison; Alternative method- ology for computing MS_{res} for a comparison)	1031
2. Comparing the means of three or more conditions when $k \geq 4$	1039
3. Evaluation of the sphericity assumption underlying the single-factor within-subjects analysis of variance	1041
4. Computation of the power of the single-factor within-subjects analysis of variance	1047
5. Measures of magnitude of treatment effect for the single-factor within-subjects analysis of variance: Omega squared (Test 24g) and Cohen's f index (Test 24h)	1049
6. Computation of a confidence interval for the mean of a treatment population	1051
7. Test 24i: The intraclass correlation coefficient	1053
VII. Additional Discussion of the Single-Factor Within-Subjects Analysis of Variance	1055
1. Theoretical rationale underlying the single-factor within-subjects analysis of variance	1055
2. Definitional equations for the single-factor within-subjects analysis of variance	1058
3. Relative power of the single-factor within-subjects analysis of var- iance and the single-factor between-subjects analysis of variance	1061
4. Equivalency of the single-factor within-subjects analysis of variance and the t test for two dependent samples when $k = 2$	1062
5. The Latin square design	1063
VIII. Additional Examples Illustrating the Use of the Single-Factor Within- Subjects Analysis of Variance	1065

Test 25: The Friedman Two-Way Analysis of Variance by Ranks	1075
I. Hypothesis Evaluated with Test and Relevant Background Information	1075
II. Example	1076
III. Null versus Alternative Hypotheses	1076
IV. Test Computations	1077
V. Interpretation of the Test Results	1078
VI. Additional Analytical Procedures for the Friedman Two-Way Analysis Variance by Ranks and/or Related Tests	1079
1. Tie correction for the Friedman two-way analysis variance by ranks	1079
2. Pairwise comparisons following computation of the test statistic for the Friedman two-way analysis of variance by ranks	1080
VII. Additional Discussion of the Friedman Two-Way Analysis of Variance by Ranks	1085
1. Exact tables of the Friedman distribution	1085
2. Equivalency of the Friedman two-way analysis of variance by ranks and the binomial sign test for two dependent samples when $k = 2$	1085
3. Power-efficiency of the Friedman two-way analysis of variance by ranks	1086
4. Alternative nonparametric rank-order procedures for evaluating a design involving k dependent samples	1086
5. Relationship between the Friedman two-way analysis of variance by ranks and Kendall's coefficient of concordance	1087
VIII. Additional Examples Illustrating the Use of the Friedman Two-Way Analysis of Variance by Ranks	1087
IX. Addendum	1088
1. Test 25a: The Page Test for Ordered Alternatives	1088
Test 26: The Cochran Q Test	1099
I. Hypothesis Evaluated with Test and Relevant Background Information	1099
II. Example	1100
III. Null versus Alternative Hypotheses	1100
IV. Test Computations	1100
V. Interpretation of the Test Results	1102
VI. Additional Analytical Procedures for the Cochran Q Test and/or Related Tests	1102
1. Pairwise comparisons following computation of the test statistic for the Cochran Q test	1102
VII. Additional Discussion of the Cochran Q Test	1106
1. Issues relating to subjects who obtain the same score under all of the experimental conditions	1106
2. Equivalency of the Cochran Q test and the McNemar test when $k = 2$	1107
3. Alternative nonparametric procedures with categorical data for evaluating a design involving k dependent samples	1109
VIII. Additional Examples Illustrating the Use of the Cochran Q Test	1109
Inferential Statistical Test Employed with a Factorial Design (and Related Measures of Association/Correlation)	1117

Test 27: The Between-Subjects Factorial Analysis of Variance	1119
I. Hypothesis Evaluated with Test and Relevant Background Information	1119
II. Example	1120
III. Null versus Alternative Hypotheses	1120
IV. Test Computations	1122
V. Interpretation of the Test Results	1128
VI. Additional Analytical Procedures for the Between-Subjects Factorial Analysis of Variance and/or Related Tests	1132
1. Comparisons following computation of the F values for the between-subjects factorial analysis of variance (Test 27a: Multiple t tests/Fisher's LSD test; Test 27b: The Bonferroni–Dunn test; Test 27c: Tukey's HSD test; Test 27d: The Newman–Keuls test; Test 27e: The Scheffé test; Test 27f: The Dunnett test; Comparisons between the marginal means; Evaluation of an omnibus hypothesis involving more than two marginal means; Comparisons between specific groups that are a combination of both factors; The computation of a confidence interval for a comparison; Analysis of simple effects)	1132
2. Evaluation of the homogeneity of variance assumption of the between-subjects factorial analysis of variance	1143
3. Computation of the power of the between-subjects factorial analysis of variance	1144
4. Measures of magnitude of treatment effect for the between-subjects factorial analysis of variance: Omega squared (Test 27g) and Cohen's f index (Test 27h)	1146
5. Computation of a confidence interval for the mean of a population represented by a group	1150
VII. Additional Discussion of the Between-Subjects Factorial Analysis of Variance	1150
1. Theoretical rationale underlying the between-subjects factorial analysis of variance	1150
2. Definitional equations for the between-subjects factorial analysis of variance	1151
3. Unequal sample sizes	1153
4. The randomized-blocks design	1154
5. Additional comments on the between-subjects factorial analysis of variance (Fixed-effects versus random-effects versus mixed-effects models; Nested factors/hierarchical designs and designs involving more than two factors; Screening designs)	1158
VIII. Additional Examples Illustrating the Use of the Between-Subjects Factorial Analysis of Variance	1161
IX. Addendum	1162
Discussion of and computational procedures for additional analysis of variance procedures for factorial designs	1162
1. Test 27i: The factorial analysis of variance for a mixed design	1162
Analysis of a crossover design with a factorial analysis of variance for a mixed design	1167
2. Test 27j: Analysis of variance for a Latin square design	1182

3. Test 27k: The within-subjects factorial analysis of variance	1203
4. Analysis of higher order factorial designs	1208
Measures of Association/Correlation	1219
Test 28: The Pearson Product-Moment Correlation Coefficient	1221
I. Hypothesis Evaluated with Test and Relevant Background Information	1221
II. Example	1225
III. Null versus Alternative Hypotheses	1225
IV. Test Computations	1226
V. Interpretation of the Test Results (Test 28a: Test of significance for a Pearson product-moment correlation coefficient; The coefficient of determination)	1228
VI. Additional Analytical Procedures for the Pearson Product-Moment Correlation Coefficient and/or Related Tests	1231
1. Derivation of a regression line	1231
2. The standard error of estimate	1240
3. Computation of a confidence interval for the value of the criterion variable	1241
4. Computation of a confidence interval for a Pearson product-moment correlation coefficient	1243
5. Test 28b: Test for evaluating the hypothesis that the true population correlation is a specific value other than zero	1244
6. Computation of power for the Pearson product-moment correlation coefficient	1245
7. Test 28c: Test for evaluating a hypothesis on whether there is a significant difference between two independent correlations	1247
8. Test 28d: Test for evaluating a hypothesis on whether k independent correlations are homogeneous	1249
9. Test 28e: Test for evaluating the null hypothesis $H_0: \rho_{XZ} = \rho_{YZ}$	1250
10. Tests for evaluating a hypothesis regarding one or more regression coefficients (Test 28f: Test for evaluating the null hypothesis $H_0: \beta = 0$; Test 28g: Test for evaluating the null hypothesis $H_0: \beta_1 = \beta_2$)	1252
11. Additional correlational procedures	1254
VII. Additional Discussion of the Pearson Product-Moment Correlation Coefficient	1255
1. The definitional equation for the Pearson product-moment correlation coefficient	1255
2. Covariance	1256
3. The homoscedasticity assumption of the Pearson product-moment correlation coefficient	1257
4. Residuals, analysis of variance for regression analysis and regression diagnostics	1258
5. Autocorrelation (and Test 28h: Durbin-Watson test)	1269
6. The phi coefficient as a special case of the Pearson product-moment correlation coefficient	1284
7. Ecological correlation	1285
8. Cross-lagged panel and regression-discontinuity designs	1288
VIII. Additional Examples Illustrating the Use of the Pearson Product-Moment Correlation Coefficient	1295

IX. Addendum	1295
1. Bivariate measures of correlation that are related to the Pearson product-moment correlation coefficient (Test 28i: The point-biserial correlation coefficient (and Test 28i-a: Test of significance for a point-biserial correlation coefficient); Test 28j: The biserial correlation coefficient (and Test 28j-a: Test of significance for a biserial correlation coefficient); Test 28k: The tetrachoric correlation coefficient (and Test 28k-a: Test of significance for a tetrachoric correlation coefficient))	1296
2. Meta-analysis and related topics (Measures of effect size; Meta-analytic procedures (Test 28l: Procedure for comparing k studies with respect to significance level ; Test 28m: The Stouffer procedure for obtaining a combined significance level (p value) for k studies ; The file drawer problem; Test 28n: Procedure for comparing k studies with respect to effect size ; Test 28o: Procedure for obtaining a combined effect size for k studies); Alternative meta-analytic procedures; Practical implications of magnitude of effect size value; Test 28p: Binomial effect size display ; The significance test controversy; The minimum-effect hypothesis testing model)	1306
Test 29: Spearman's Rank-Order Correlation Coefficient	1353
I. Hypothesis Evaluated with Test and Relevant Background Information	1353
II. Example	1355
III. Null versus Alternative Hypotheses	1355
IV. Test Computations	1356
V. Interpretation of the Test Results (Test 29a: Test of significance for Spearman's rank-order correlation coefficient)	1357
VI. Additional Analytical Procedures for Spearman's Rank-Order Correlation Coefficient and/or Related Tests	1359
1. Tie correction for Spearman's rank-order correlation coefficient	1359
2. Spearman's rank-order correlation coefficient as a special case of the Pearson product-moment correlation coefficient	1361
3. Regression analysis and Spearman's rank-order correlation coefficient	1362
4. Partial rank correlation	1363
5. Use of Fisher's z_r transformation with Spearman's rank-order correlation coefficient	1364
VII. Additional Discussion of Spearman's Rank-Order Correlation Coefficient	1364
1. The relationship between Spearman's rank-order correlation coefficient, Kendall's coefficient of concordance, and the Friedman two-way analysis of variance by ranks	1364
2. Power efficiency of Spearman's rank-order correlation coefficient	1367
3. Brief discussion of Kendall's tau: An alternative measure of association for two sets of ranks	1367
4. Weighted rank/top-down correlation	1367
VIII. Additional Examples Illustrating the Use of the Spearman's Rank-Order Correlation Coefficient	1368

Test 30: Kendall's Tau	1371
I. Hypothesis Evaluated with Test and Relevant Background Information	1371
II. Example	1373
III. Null versus Alternative Hypotheses	1373
IV. Test Computations	1374
V. Interpretation of the Test Results (Test 30a: Test of significance for Kendall's tau)	1376
VI. Additional Analytical Procedures for Kendall's Tau and/or Related Tests	1379
1. Tie correction for Kendall's tau	1379
2. Regression analysis and Kendall's tau	1382
3. Partial rank correlation	1382
4. Sources for computing a confidence interval for Kendall's tau	1382
VII. Additional Discussion of Kendall's Tau	1382
1. Power efficiency of Kendall's tau	1382
2. Kendall's coefficient of agreement	1382
VIII. Additional Examples Illustrating the Use of Kendall's Tau	1382
Test 31: Kendall's Coefficient of Concordance	1387
I. Hypothesis Evaluated with Test and Relevant Background Information	1387
II. Example	1388
III. Null versus Alternative Hypotheses	1388
IV. Test Computations	1389
V. Interpretation of the Test Results (Test 31a: Test of significance for Kendall's coefficient of concordance)	1390
VI. Additional Analytical Procedures for Kendall's Coefficient of Concordance and/or Related Tests	1391
1. Tie correction for Kendall's coefficient of concordance	1391
VII. Additional Discussion of Kendall's Coefficient of Concordance	1393
1. Relationship between Kendall's coefficient of concordance and Spearman's rank-order correlation coefficient	1393
2. Relationship between Kendall's coefficient of concordance and the Friedman two-way analysis of variance by ranks	1394
3. Weighted rank/top-down concordance	1396
4. Kendall's coefficient of concordance versus the intraclass correlation coefficient	1396
VIII. Additional Examples Illustrating the Use of Kendall's Coefficient of Concordance	1398
Test 32: Goodman and Kruskal's Gamma	1403
I. Hypothesis Evaluated with Test and Relevant Background Information	1403
II. Example	1404
III. Null versus Alternative Hypotheses	1405
IV. Test Computations	1406
V. Interpretation of the Test Results (Test 32a: Test of significance for Goodman and Kruskal's gamma)	1409
VI. Additional Analytical Procedures for Goodman and Kruskal's Gamma and/or Related Tests	1410

1. The computation of a confidence interval for the value of Goodman and Kruskal's gamma	1410
2. Test 32b: Test for evaluating the null hypothesis $H_0: \gamma_1 = \gamma_2$	1411
3. Sources for computing a partial correlation coefficient for Goodman and Kruskal's gamma	1412
VII. Additional Discussion of Goodman and Kruskal's Gamma	1412
1. Relationship between Goodman and Kruskal's gamma and Yule's Q	1412
2. Somers' delta as an alternative measure of association for an ordered contingency table	1412
VIII. Additional Examples Illustrating the Use of Goodman and Kruskal's Gamma	1413

Multivariate Statistical Analysis 1417

Matrix Algebra and Multivariate Analysis 1419

I. Introductory Comments on Multivariate Statistical Analysis	1419
II. Introduction to Matrix Algebra	1420

Test 33: Multivariate Regression 1433

I. Hypothesis Evaluated with Test and Relevant Background Information	1433
II. Examples	1439
III. Null versus Alternative Hypotheses	1441
IV/V. Test Computations and Interpretation of the Test Results	
Test computations and interpretation of results for Example 33.1 (Computation of the multiple correlation coefficient; The coefficient of multiple determination; Test of significance for a multiple correlation coefficient; The multiple regression equation; The standard error of multiple estimate; Computation of a confidence interval for Y' ; Evaluation of the relative importance of the predictor variables; Evaluating the significance of a regression coefficient; Computation of a confidence interval for a regression coefficient; Analysis of variance for multiple regression; Semipartial and partial correlation (Test 33a: Computation of a semipartial correlation coefficient ; Test of significance for a semipartial correlation coefficient; Test 33b: Computation of a partial correlation coefficient ; Test of significance for a partial correlation coefficient)	1442
Test computations and interpretation of results for Example 33.2 with SPSS	1459
VI. Additional Analytical Procedures for Multiple Regression and/or Related Tests	1470
1. Cross-validation of sample data	1470
VII. Additional Discussion of Multivariate Regression	1471
1. Final comments on multiple regression analysis	1471
2. Causal modeling: Path analysis and structural equation modeling	1472
3. Brief note on logistic regression	1473
VIII. Additional Examples Illustrating the Use of Multivariate Regression	1474

Test 34: Hotelling's T^2	1483
I. Hypothesis Evaluated with Test and Relevant Background Information	1483
II. Example	1483
III. Null versus Alternative Hypotheses	1484
IV. Test Computations	1485
V. Interpretation of the Test Results	1486
VI. Additional Analytical Procedures for Hotelling's T^2 and/or Related Tests	1488
1. Additional analyses following the test of the omnibus null hypothesis	1488
2. Test 34a: The single-sample Hotelling's T^2	1489
3. Test 34b: The use of the single-sample Hotelling's T^2 to evaluate a dependent samples design	1491
VII. Additional Discussion of Hotelling's T^2	1495
1. Hotelling's T^2 and Mahalanobis' D^2 statistic	1495
VIII. Additional Examples Illustrating the Use of Hotelling's T^2	1495
Test 35: Multivariate Analysis of Variance	1499
I. Hypothesis Evaluated with Test and Relevant Background Information	1499
II. Example	1500
III. Null versus Alternative Hypotheses	1501
IV. Test Computations	1502
V. Interpretation of the Test Results	1503
VI. Additional Analytical Procedures for the Multivariate Analysis of Variance and/or Related Tests	1510
VII. Additional Discussion of the Multivariate Analysis of Variance	1510
1. Conceptualizing the hypothesis for the multivariate analysis of variance within the context of a linear combination	1510
2. Multicollinearity and the multivariate analysis of variance	1510
VIII. Additional Examples Illustrating the Use of the Multivariate Analysis of Variance	1511
Test 36: Multivariate Analysis of Covariance	1515
I. Hypothesis Evaluated with Test and Relevant Background Information	1515
II. Example	1516
III. Null versus Alternative Hypotheses	1517
IV. Test Computations	1517
V. Interpretation of the Test Results	1518
VI. Additional Analytical Procedures for the Multivariate Analysis of Covariance and/or Related Tests	1521
VII. Additional Discussion of the Multivariate Analysis of Covariance	1521
1. Multiple covariates	1521
VIII. Additional Examples Illustrating the Use of the Multivariate Analysis of Covariance	1522
Test 37: Discriminant Function Analysis	1525
I. Hypothesis Evaluated with Test and Relevant Background Information	1525
II. Examples	1527
III. Null versus Alternative Hypotheses	1528

IV. Test Computations	1529
V. Interpretation of the Test Results	1531
Analysis of Example 37.1	1531
Analysis of Example 37.2	1543
VI. Additional Analytical Procedures for Discriminant Function Analysis and/or Related Tests	1552
VII. Additional Discussion of Discriminant Function Analysis	1552
VIII. Additional Examples Illustrating the Use of Discriminant Function Analysis	1552
Test 38: Canonical Correlational	1557
I. Hypothesis Evaluated with Test and Relevant Background Information	1557
II. Example	1560
III. Null versus Alternative Hypotheses	1560
IV. Test Computations	1560
V. Interpretation of the Test Results	1561
VI. Additional Analytical Procedures for Canonical Correlation and/or Related Tests	1574
VII. Additional Discussion of Canonical Correlation	1574
VIII. Additional Examples Illustrating the Use of Canonical Correlation	1575
Test 39: Logistic Regression	1581
I. Hypothesis Evaluated with Test and Relevant Background Information	1581
II. Example	1584
III. Null versus Alternative Hypotheses	1584
IV. Test Computations	1587
V. Interpretation of the Test Results	1590
Results for a binary logistic regression with one predictor variable	1590
Results for a binary logistic regression with multiple predictor variables	1598
VI. Additional Analytical Procedures for Logistic Regression and/or Related Tests	1605
VII. Additional Discussion of Logistic Regression	1606
VIII. Additional Examples Illustrating the Use of Logistic Regression	1606
Test 40: Principal Components Analysis and Factor Analysis	1615
I. Hypothesis Evaluated with Test and Relevant Background Information	1615
II. Example	1618
III. Null versus Alternative Hypotheses	1618
IV. Test Computations	1618
V. Interpretation of the Test Results	1622
VI. Additional Analytical Procedures for Principal Components Analysis and Factor Analysis and/or Related Tests	1634
1. Principal axis factor analysis of Example 40.1	1634
VII. Additional Discussion of Principal Components Analysis and Factor Analysis	1635
1. Criticisms of factor analytic procedures	1635
2. Cluster analysis	1635
3. Multidimensional scaling	1636

VIII. Additional Examples Illustrating the Use of Principal Components Analysis and Factor Analysis	1637
Appendix: Tables	1647
Table A1. Table of the Normal Distribution	1651
Table A2. Table of Student's t Distribution	1656
Table A3. Power Curves for Student's t Distribution	1657
Table A4. Table of the Chi-Square Distribution	1661
Table A5. Table of Critical T Values for Wilcoxon's Signed-Ranks and Matched-Pairs Signed-Ranks Tests	1662
Table A6. Table of the Binomial Distribution, Individual Probabilities	1663
Table A7. Table of the Binomial Distribution, Cumulative Probabilities	1666
Table A8. Table of Critical Values for the Single-Sample Runs Test	1669
Table A9. Table of the F_{\max} Distribution	1670
Table A10. Table of the F Distribution	1671
Table A11. Table of Critical Values for Mann-Whitney U Statistic	1679
Table A12. Table of Sandler's A Statistic	1681
Table A13. Table of the Studentized Range Statistic	1682
Table A14. Table of Dunnett's Modified t Statistic for a Control Group Comparison	1684
Table A15. Graphs of the Power Function for the Analysis of Variance	1686
Table A16. Table of Critical Values for Pearson r	1690
Table A17. Table of Fisher's z , Transformation	1691
Table A18. Table of Critical Values for Spearman's Rho	1692
Table A19. Table of Critical Values for Kendall's Tau	1693
Table A20. Table of Critical Values for Kendall's Coefficient of Concordance	1694
Table A21. Table of Critical Values for the Kolmogorov-Smirnov Goodness-of-Fit Test for a Single Sample	1695
Table A22. Table of Critical Values for the Lilliefors Test for Normality	1696
Table A23. Table of Critical Values for the Kolmogorov-Smirnov Test for Two Independent Samples	1697
Table A24. Table of Critical Values for the Jonckheere-Terpstra Test Statistic	1699
Table A25. Table of Critical Values for the Page Test Statistic	1701
Table A26. Table of Extreme Studentized Deviate Outlier Statistic	1703
Table A27. Table of Durbin-Watson Test Statistic	1704
